wellead

2022 - 2023

◆ Ureteral Stent

A double J ureteral stent, or ureteric stent, is inserted into the ureter to prevent or treat obstruction of the urine flow from the kidney into the bladder. J shaped curls are present at both ends to hold the tube in place and prevent migration.

■ Features

- Made of medical grade polyurethane (PU) with superior biocompatibility and less encrustation
- Pigtail shape preventing stent migration
- Smooth surface for easy placement and withdrawal
- Thin wall for maximum drainage
- Clear markings facilitating confirmation of placement
- Good radiopacity for easy visualization
- Available with different designs, coatings, lengths and diameters

◆ Endoscope

■ Features

- Straight, rather than gradual, shaft with minimum diameter for easier, and less invasive advancement
- Slightly beveled tip for atraumatic insertion
- Semilunar design providing maximum working channel, and better irrigation flow
- CPR2/95, CPR2/125, and CPR3/125 allowing the insertion of ureteral stents
- Ergonomic hand piece for convenient and comfort control of the device
- Compatible with all brands of video cameras and light cables
- Irrigation ports with standard luer lock stopcocks
- Working channel with standard luer lock ports
- Autoclavable

ClearPetra®

System for Continuous Flow Lithotripsy

The ClearPetra System for Continuous Flow Lithotripsy of Well Lead Medical is designed for the effective and efficient treatment of urinary stones using **Negative Pressure Aspiration** through an oblique side port on the ClearPetra sheath. It has high stone clearance rate, reduces the intra-luminal pressure in the urinary tract, prevents stone retropulsion, improves visual field, obviates the need of stone baskets, forceps, or any anti-retropulsion devices, and saves operating time.

INDICATIONS

ClearPetra Ureteral Access Sheath

Use for renal stones, ureteral stones, ureteral steinstrasse

ClearPetra Nephrostomy Access Sheath Set

Use for renal stones and upper ureteral stones

ClearPetra Cystoscope Sheath

Use for bladder stones

Stone Collection Bottle

Use for collecting stones

BENEFITS

1 Reduces Intra-luminal Pressure

A vortex is created by the continuous irrigation and suction. It reduces the operational (intra-luminal) pressure and reduces the risk of surgery.

2 No More Stone Retropulsion

Effectively prevents retrograde stone migration with Negative Pressure Aspiration and at the same time removes the stone fragments.

3 Improved Visual Field

Under the continuous irrigation and suction, bleeding and dust storm from stone pulverization no longer obscure the visual field.

4 Improved Stone Clearance

Stone fragments will aggregate at the distal end of the ClearPetra sheath instead of scattering and are removed through the oblique side port on the ClearPetra Sheath by the continuous suction.

5 No Accessory Device Required

Stone baskets, forceps, and anti-retropulsion devices are no longer necessary. Under the Negative Pressure Aspiration, the stone fragments are evacuated spontaneously.

• ClearPetra Ureteral Access Sheath

Dilation

Urethral Dilator Set

● Straight Urethral Dilators

Straight Urethral Dilators are used for dilation of male and female urethra.

■ Features

- Hydrophilic coating reduces friction and eases placement
- Tapered tip with smooth transition minimizes trauma
- Hollow lumen accepts guide wire 0.038" for convenient advancement over the wire
- Stainless steel guide wire 0.038" 150cm can be available upon request

● Ureteral Balloon Dilation Catheter Set

The Ureteral Balloon Dilation catheters are used for dilation of the ureter prior to ureteroscopy and stone manipulation.

■ Features

- Platinum bands paced at the proximal and distal ends of the balloon for easy visualization of the balloon dilation positioning
- Nylon balloon can yield pressure up to 20 - atm
- Tapered tip facilitating ease introduction and advancement over the guide wire through difficult anatomy
- 3Fr Ureteral Balloon Dilation Catheter is preloaded with a nitinol guidewire for direct insertion

Stone Retrieval Basket

The Stone Retrieval basket is designed to manipulate, grasp and remove calculi and foreign bodies from the urinary tract. Its detachable handle allows the withdrawal and re-entrance of the scope when the basket is situated.

■ Features

- Torque-resistant Nitinol wire basket with round construction facilitating efficient capture and atraumatic manipulation of calculi
- Low friction kink-resistant sheath providing smooth endoscopic passage
- Available with different designs: tipless designs allowing for closer proximity to stones; Tipped baskets facilitating access to stones in torturous anatomy
- Ergonomic handle promoting excellent single-hand control through the procedure
- Handles and sheaths can be detached easily and completely when needed; the nitinol core can be left in place working as a guide wire when the basket cannot be released from the stone; the basket can be easily re-assembled once it is removed from the patient; Not suitable for 3-wire stone retrieval basket

◆ Ureteral Catheter

The Ureteral Catheters are used for drainage, retrograde pyelogram and atraumatic entry of the Ureteral Orifice.

■ Features

- Available with different tip configurations and sizes
- Open tip for atraumatic passage into and through the ureter and for placement over a guide wire
- Closed tip supplied with a steel wire for easy placement
- Good radiopacity for easy visualization
- Clear markings facilitating confirmation of placement
- Standard Luer connector is supplied with each catheter
- Stainless steel guide wire is available for open tip catheter upon request

◆ Suprapubic Catheter Set

Suprapubic catheters are used for bladder drainage when the urethra is damaged or blocked, or when an intermittent catheter is not applicable.

● Suprapubic Catheter

■ Features

- Medical grade silicone with good biocompatibility for enhanced patient comfort
- Smooth atraumatic open tip
- Catheters with standard balloon and integrated balloon available

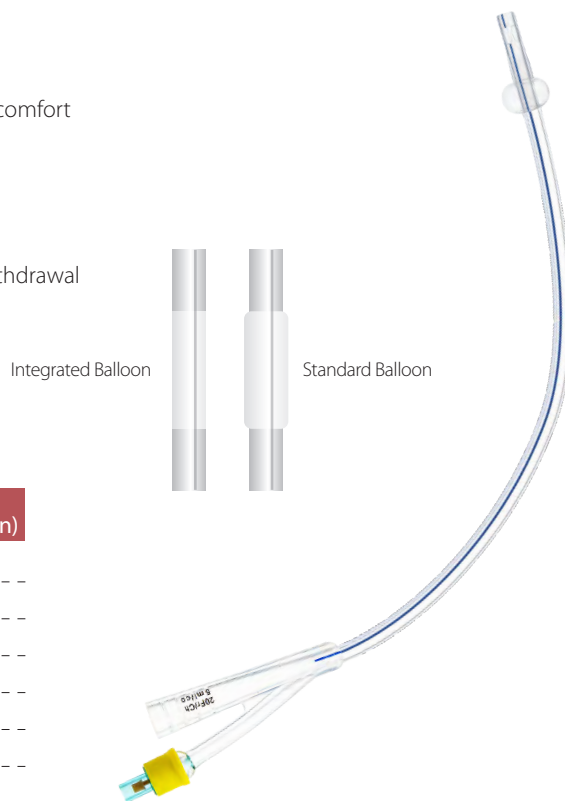

Only for Suprapubic Catheter, with Integrated Balloon

- Low profile integrated balloon minimizes trauma during insertion and withdrawal
- Each Catheter is supplied with a spigot in the same pack

■ Suprapubic Catheter 2-way

● Suprapubic Puncture Set

Suprapubic puncture set contains necessary components for simple and quick suprapubic catheterization.

■ Features

- Low Profile integrated balloon minimizes trauma
- The one - step trocar contains a 18G puncture needle, a dilator, and peel-away sheath, allowing for puncture, dilation and access simply
- The puncture needle can be removed for passage of urine flow to confirm position of the trocar
- The peel-away sheath facilitates placement of the catheter conveniently
- Drainage Bag: 2000ml, with anti-reflux valve, T Tap outlet valve, 90cm inlet tube

* 5pcs/box, 45pcs/ctn

* More specifications can be available upon request

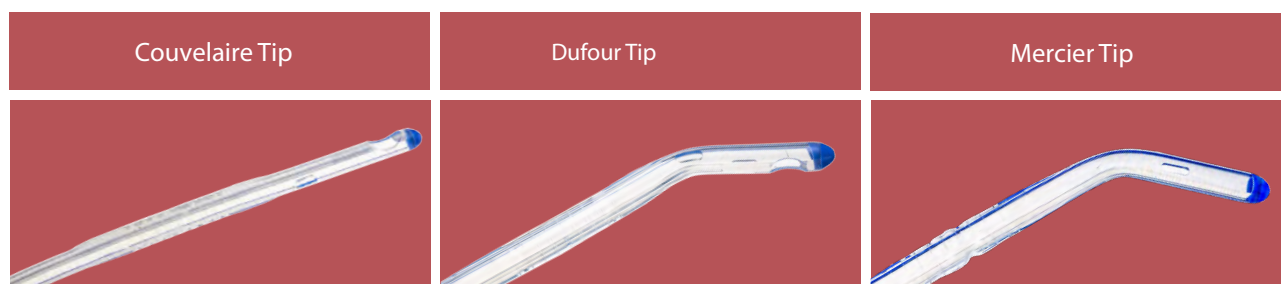

◆ Post Operative Drainage Catheters

Post operative drainage catheter are used for drainage of urine, debris, etc after operations.

■ Features

- Made of medical grade silicone with good bio-compatibility
- Color coding for easy size identification
- Extra drainage eyes for good removal of blood clots, debris etc
- Large Balloons available to stop bleeding

The Couvelaire tip and its 2 sets of opposite drainage eyes provide rapid and effective drainage of blood clots and debris.

It is intended for use by postoperative patients and in situation that need removal of blood clots and sediments.

The Dufour tip is slightly curved, with 2 sets of large and staggered eyes, which allow high performance drainage and irrigation after surgery.

It is intended for use by male patient with need for drainage and cleaning of the bladder after surgery.

The Mercier tip is slightly curved, with 2 sets of large and staggered eyes, and with a tip hole.

It is used for transurethral drainage and irrigation of bladder to remove the large blood clots and sediments.

◆ Urodynamic Catheter

Urodynamic catheters are used for cystometry and urethral pressure profilometry to evaluate lower urinary tract function.

■ Features

- Color coded connectors for easy identification
- Standard luer fittings
- Good Radiopacity
- Designed for water-fill infusion technique

● Double Lumen Cystometry Catheter

Filling and measuring bladder pressure during cystometry and pressure flow studies

Size (Fr)	Length (cm)	Cat. No.
6	40	U08A010610
7	40	U08A010710

Laparoscopic Retrieval Bag

Features

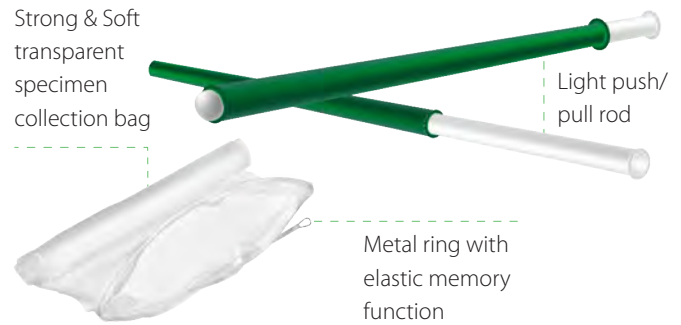

- Disposable device used to remove tissue specimens during laparoscopic surgery
- Especially strong and transparent bag made of impermeable, tear-resistant polyurethane material
- Prevent diseased tissue from contacting healthy tissue effectively
- Easy intra-abdominal opening and closure
- Can be used with 10mm or 12mm Trocar
- Variety of sizes and suitable for a wide range of procedures

Type C	550	O02A030510
Type C	800	O02A030810

* 5pcs/box, 100pcs/ctn

Type A

Simplified structure for convenient operation

Type B

Excellent design, applicable for small specimen extraction

Type C

Perfect upgrade, detachable design, applicable for large specimen extraction
